

Names: \_\_\_\_\_

Write a program that asks the user for their full name and which reformats it to start with the last name, a comma, and then the remainder of the name. Some sample executions might appear as follows:

```
What is your name? Bugs Bunny  
Bunny, Bugs
```

```
What is your name? Elmer J. Fudd  
Fudd, Elmer J.
```

```
What is your name? George Herbert Walker Bush  
Bush, George Herbert Walker
```

You will get 80% credit so long as your program works on an input with two names (e.g., Bugs Bunny), but it must work on any of these inputs for full credit.
